

25 de jun. de 2025 | 📅 TCC Inteli

Participants: Lucas Conti Pereira, Gabriela de Moraes da Silva, Ana Franco, Lígia Oliveira.

Laura Feitosa was unable to attend but aligned project expectations in person beforehand.

Notes

The meeting began with Gabriela and Lucas presenting the document containing all the deliverables completed since the beginning of the year. The team reviewed the project's progress, highlighting key decisions, developed prototypes, and insights gained in each phase.

Next, the planned deliveries for this sprint were presented, which marks the closure of the module. This included the consolidation of the high-fidelity prototype and the corresponding documentation from the latest user validations.

Feedback on the Final Prototype – New Course Screen:

Based on usability analyses and alignment with the design team, the following changes were agreed upon:

Element	Change	Justification
Certificate	Visually highlight that the course offers a certificate	Make certification a visible attraction to the user, encouraging engagement with officially recognized courses
Course language	Reposition within the "About the track" card	Maintain a clean layout at the top of the screen; language is a secondary piece of information in the initial context

Top card (course summary)	<ul style="list-style-type: none"> - Display if there is a certificate - Display number of modules - Remove number of enrolled students 	Make the card more objective, focusing on information relevant to user planning
Supplementary materials	Reposition to the bottom of the screen	Follow the logical flow of reading and execution: main content first, followed by additional resources
Activity progress	Change from percentage to binary (0 or 100)	More clearly reflect the platform logic, where progress is understood as either complete or incomplete
Upcoming activities card	<ul style="list-style-type: none"> - Review and standardize font sizes - Replace calendar icon with the one from the Orquestra Design System 	Ensure visual consistency and alignment with the official components of the Design System

Action Items:

At the end of the meeting, we requested that the participants reply to the previously sent email to formally validate the deliverables. We also took the opportunity to thank them for their ongoing support and collaboration, which have

been essential to the evolution of the proposed solution.
